1. Introduction

2.1 Objectives

Many students seek convenient and flexible ways to take their exams from home. This online exam platform is designed to save time and effort, providing a seamless and efficient testing experience while keeping the exam secure, free of cheating, and able to be monitored.

This document contains the following sections:

- User roles.
- Workflow diagrams.
- Functional requirements.

2.2 System Overview

The system is an integrated program developed to provide an easy, efficient, and secure way to take exams online. It is a dynamic and responsive system that ensures a smooth and monitored examination process. The system consists of the following main parts:

- ✓ Access the exam via email link.
- ✓ Navigate and answer questions.
- ✓ Submit the exam and view the results.
- ✓ Monitored and secure testing environment.
- ✓ Additional support features.

2. User Roles

2.1 Admin

The Admin oversees the overall management and configuration of the system, including adding and managing Proctors, defining their monitoring periods, ensuring the system functions properly, and maintaining the security and integrity of the exam environment.

2.3 Exam Provider

The Exam Provider supplies the exam content and structure, receives available scheduling slots, sends exam reservations, and processes exam results after completion.

2.3 Proctor

The Proctor monitors the exam sessions to ensure integrity and compliance by accessing and overseeing the assigned sessions, observing live video feeds of the student's camera and screen, communicating with the student, issuing warnings if necessary, and terminating the exam session if rules are violated.

2.4 Exam Taker

The Exam Taker is the student who participates in the exam, enters the exam using the emailed link, answers questions, navigates between questions while deferring some if needed, and views their results to know whether they passed or failed upon completion.

3. Functional Requirements

3.1 Admin

- Login to the system.
- See Exam Providers.
- See All Exams Added by Providers.
- The admin should be able to add proctor to the system.
- The admin should be able to specify monitoring periods for each proctor.
- See upcoming exam sessions.
- The admin should be able to specify the proctor for each session.
- See the results of all exam sessions.

3.2 Exam Provider

- Register and log in to the system.
- View his information.
- View his unique key that will be used to communicate with the system.
- Manage his exams.
- Receive available exam scheduling slots from the Exam Guardian system.
- Send exam reservations to the Exam Guardian system.
- After the student completes the exam, their score should be sent to the exam provider.

Note: The last 3 functionalities should be APIs that are implemented appropriately for integration with the provider's system.

3.3. Proctor

- See exam sessions that require monitoring by him.

- Access the exam session.
- View live video feeds of the taker's camera.
- Communicate with the taker via Chat.

3.4 Taker

- Enter the exam using the link received via email.
- Communicate with proctor via Chat.
- Answer the exam questions.
- Navigate between questions.
- Upon completing the exam, the student can view his result and know whether he passed or failed.

3.5 System

- When a provider creates an account, the system must generate a unique key that can be used by providers to communicate with the system.
- The system should automatically determine available time slots for exam scheduling based on available proctors.
- Once the exam starts, the browser should switch to full-screen mode, preventing the opening of any applications or new tabs.
- The system should prevent the student from copying any text from the exam.
- The camera should be opened to start the exam.

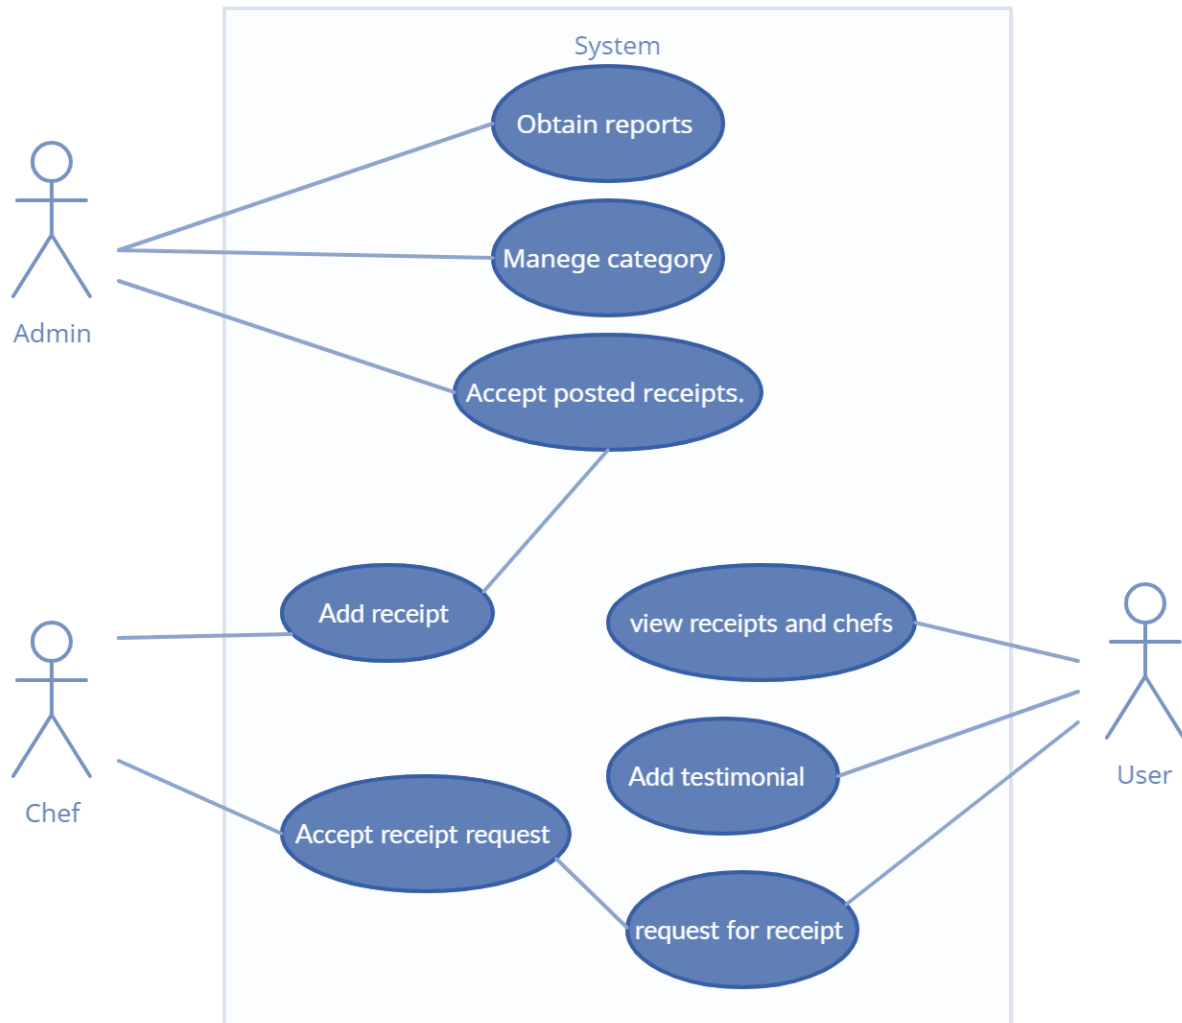

4. Workflow Chart

4.1 Home

Header
Navbar
Background/ Slider
Templates
Contact Form
Footer

4.2 Use Case Diagram

5. Interface Design

- Use the Bootstrap template to prepare the home page.
- Use the recognized colors in the design.
- Use a dashboard template for different users.
- Users' sessions must be designed.

6. Rules

- Keep the rules of the clean code.
- Keep the rules of the business.
- Don't forget to design the logout button.
- Keep the project name.

7. Project Programming Language and Technologies

- Use Visual Studio 2022.
- Oracle Server.
- Use SQL Developer.
- Use ASP.NET Core MVC.

8. Project Upload Requirements

- Upload your project code.
- Upload Project Presentation (Advertising presentation) .
- Upload Project Video.

9. Project Evaluation

- 15% Project video and presentation.
- 35% Interfaces Design.
- 50% Code Functionality.

10. Deadline

May 7, 2024 – May 23, 2024
