1. Introduction

2.1 Objectives

Many people want to save time by finding food recipes with ingredients from their homes, so, this website is designed to reduce the effort to reach better food recipes.

This document contains the following sections:

- User roles.
- Workflow diagrams.
- Functional requirements.

2.2 System Overview

The system is an integrated program developed to find an easy way to reach a cooking recipe with its ingredients.

It is a dynamic and responsive system. This provides a way to find recipes easily.

The system consists of the following main parts:

- ✓ Choose a category.
- ✓ Discover recipe ingredients.
- ✓ Save the recipe.
- ✓ Add a new recipe.
- ✓ Additional service.

2. User Roles

2.1 Admin

The user who has full control of the system and follows up on all the newly added recipes made on the website and issues monthly and annual reports showing the website's profits or losses.

2.2 User

The user browses the website, and searches for recipes.

2.3 Chef

The user who adds recipes and receives receipts requests from other users.

2.4 Guest User

A user who visits the website can ask for any confusing thing on the website.
